

ImageTrust capture is the most modern web-based capture platform that enables easy, low cost, global remote capture. Enterprises using legacy alternatives embark on a multi-step manual process to introduce work into the desired line of business application. This inefficient time-consuming process limits the amount of efficiency and automation that can be achieved. In addition, these applications are notoriously costly, hard to configure, difficult to maintain, and incompatible with modern day workflows.

Outdated capture solutions slow the business down drastically which is why we have created an offering that scales efficiently and offers the kind of flexibility desired to collect content at the edge of the business and add instant intelligence. ImageTrust by Image Access Corp is an elegant yet robust capture platform that works anywhere you have access to a web-browser. Our interface guides users, enables rapid document capture with real time previews, and allows knowledge workers to have access to unparalleled document controls.

ImageTrust Benefits |

- Captures paper, email, and eDocs
- Web-based concurrent licensing
- Drives any TWAIN/ISIS scanner, MFP's, etc.
- Supports drag-n-drop of electronic documents
- Simple installs and upgrades
- Multiple deployment options (on-prem, private, public cloud)
- Distributed (20ppm) to centralized scanning (210ppm)
- Leverages the latest AI, ML, and RPA
- Secure SSL encryption and Redaction

ImageTrust Versions |

ImageTrust Batch helps organizations transform their infrastructure by combining web-based capture and extraction with legacy and modern ECM environments. *ImageTrust Transactional* embeds capture and extraction within business applications. Both solutions result in rapid deployments, lower costs, and a more efficient means to extend and support intelligent capture, wherever it is needed in an organization.

ImageTrust Batch fits within all capture/ECM environments. It can be used as a browser-based capture client for centralized or distributed scanning and indexing operations, and can openly leverage the latest advanced extraction services in real time.

Common Batch Capture Challenges

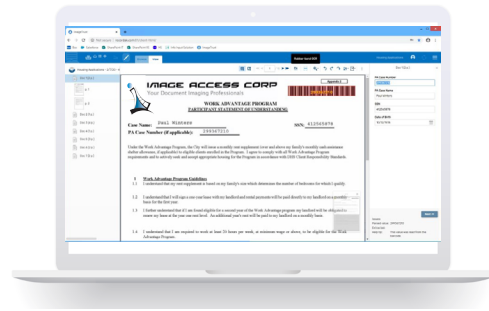

- Slow response to ever-changing customization demands
- Thick client deployment and support burden
- Poor user experiences causing errors and exception handling
- Weak security in existing capture solution

Results

- Lowers time spent adding new process configurations by 50 percent
- Reduces errors and exception processing
- Eliminates security risks
- Cut backs supports costs
- Increases revenue from efficient customer acquisitions

ImageTrust Implementation

- Deploys and is supported centrally - browser based
- Doesn't require desktop SW installation
- Increase automation through ImageTrust's open architecture
- Drives production scanners through the browser

ImageTrust Transactional is embedded in any web-based line-of-business application as a scan button plugin. Users no longer have to leave one application to process documents in another, making information immediately available. Common capture solutions, whether distributed or centralized, are a separate process performed outside of a business application. Typically, when the capture process is complete, documents and associated data are exported and made available to a business application. As business applications become more responsive, social, customer-facing, and web-based, businesses ask: "Can we capture directly within these applications?"

Common Transactional Capture Challenges

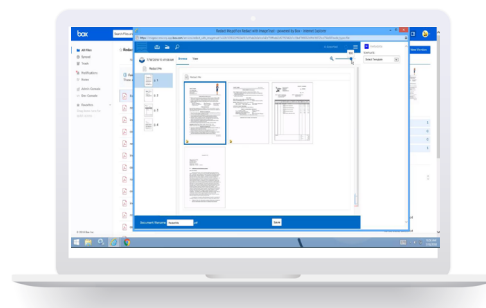

- Long delays in information availability
- Frustrating multi-step processes
- Tedious error exception processing
- Inefficient document shipping
- High costs of current capture infrastructures

Results

- Makes capture as easy as printing
- Reduces implementation time by 70 percent
- Increases customer responsiveness
- Enables multiple end-user implementations with ease
- Increases efficiency through viewer/editor functions
- Eliminates shipping costs

ImageTrust Implementation

- Plugs in to host application
- Leverages existing configuration to provide all user authentication from host application
- Captures paper, email, eDocs
- Employs advanced capture services through an open and web-based architecture

Additional Solution Aspects |

ImageTrust Mobile is a full-featured mobile capture application available for both IOS and Android devices. It allows users to capture quality images via on-device image processing, and then edit, index, and quickly move documents into a business process.

ImageTrust with real time redaction helps protect the enterprise against the inadvertent and unintentional release of confidential information. The need to secure this private information is common across industries yet many organizations struggle with protecting themselves and their customers. ImageTrust with real time redaction gives an organization a powerful way to easily redact information from a variety of document types, whether structured, semi-structured, or unstructured.
